

ACKNOWLEDGEMENTS

This book is a compilation of chapters about the history of the Town of Underhill, VT written by a number of authors. Its production would not have been possible without the computer expertise of Kika McArthur, who is also responsible for the graphic design and many of the outstanding photographs. The chapter on the History of Business and Social Life in Underhill Flats/Riverside by Gary Irish, local Jericho historian, is a volume in itself. The pen and ink drawings of historical railroad engines by Stanton Hamlet in his chapter about the Burlington and Lamoille Railroad are particularly notable. The 100 year history of the Jericho Underhill Fire Department by Randy Clark, Sr has been included as originally laid out and published in the Mountain Gazette by Brenda Boutin. Former Underhill Town Clerk and Treasurer, Luella Lamphere, compiled several of the historical databases which were computerized by ET Moore, who also computerized the historical maps.

The first chapter which describes the geology and physiography of Underhill could not have been written without the kind support of former professor and chairman of the UVM Department of Geology and State Geologist, the late Charles H. Doll. He not only shared important references, but personally showed me many of the outstanding geological features of Underhill.

Underhill Town Planning has been dependent on the original contributions by soil scientist Robert Towne of the US Department of Soil Conservation in Essex Junction, as well as the late chairman, Art Hogan and his assistant, Don Rich, of the Chittenden County Regional Planning Commission.

Some of the early history of Underhill is on the Internet. The history by Emily Flynn, which was unpublished, has been included with some corrections. Thanks go to Judy and Gael Boardman for sharing the trove of Underhill ephemera given to them by collectors, Roland and Mary Ellis. Many new items added greatly to formerly forgotten Town history. The assistance of First Step Print Shop has been invaluable. The book binding is courtesy of Marianna Holzer of Holzer Productions.
